**AutoCAD** has many uses and is even being leveraged by industries beyond the architectural and mechanical fields. For example, custom stage design companies may use the 3D modeling tools within **AutoCAD** to turn creative ideas into detailed conceptual designs that they are confident about because they can visualize nearly exactly what they need to build. In the case of custom window design companies, **AutoCAD** software may be used to create an online library of customizable window designs to help customers configure orders and request quotes more quickly and easily. In the case of set and lighting design companies, **AutoCAD** may be used in conjunction with 3ds Max to design sets and lighting in 3D and develop near-photorealistic visualizations of events to review with their clients. Ultimately, **AutoCAD** enables companies to design and plan projects virtually. This, in turn, increases productivity, reduces the time it takes for decision makers to make more informed choices, and significantly lowers the cost it takes to confidently complete major projects.

MagiCAD now includes a new valve category for 3-port valves. The new version also supports connections to all three ports and calculations of systems with 3 port valves.

A new All rooms category allows users to simultaneously set values for multiple similar rooms, for example, if they are located on different floors. Group editing values saves time and eliminates the need to edit similar rooms one by one.

The emphasis of this book is on easy to understand descriptions and instructions, allowing the non-technical, artistic, visual learning Interior Design student to quickly get past the fear of using the computer to produce drawings. The focus is entirely on the use of AutoCAD for the Interior Design field and not simply architectural drawings.

Data that can be directly input into a field, for example description, dimensions, elevation, object variables etc, is directly accessible with a right-click. Other data that requires a selection or checking checkboxes, for example installation code, IP class, earthing etc, can be changed with a separate Set Properties button. Object names can also be changed with a right-click, but this must be done one-by-one. The final two columns in the list display the storey and the drawing where the object is located.

The new version enables users to schedule and automate the production of quantity take-off reports with a new Batch Report functionality. Automated quantity take-offs provide significant time savings, eliminating the need to run each report configuration individually. You can also produce reports from multiple projects with a single command. Scheduling automated reports removes the need for manual involvement and ensures that reports are produced when needed.

You can now define power for all communication, data and building automation devices in a project. The extra low voltage system power can be summarized to circuits directly from the circuit properties dialogue or by using the Update Drawing Data function.

Finally, the “Set MagiCAD Data to AutoCAD Object” function in Ventilation and Piping has been improved with an additional hyperlink field, similarly to other MagiCAD objects. The functionality itself has been added to the Electrical module making it possible to, for example, convert project-specific luminaires that have been modelled as AutoCAD blocks into MagiCAD objects. These objects are then included in quantity take-off reports from the models.
