As always there are many restrictions and limitations associated with the official firmware - you can't install unsigned apps and can't access system files and folders. Moreover without *hacking* the official firmware you can't use various mods and patches which greatly enhance the functionality of phone. Unfortunately no working **hack** is available for Belle FP2 currently so the only *hacking* method remains - flashing the phone with a custom firmware (which are pre-hacked). Custom firmwares are like custom Android ROMs with some changes done in software files. Thanks to independent developers (mostly at dailymobile forum), some excellent custom firmwares (CFW) are available for Nokia 808PV. With loads of useful built-in mods/*hacks* and extra features, these custom firmwares will transform your phone into a geeky-gadget.
