Don't let its basic user interface fool you: This plug-in provides a wealth of controls to make your subject look his or her best. Using face detection and advanced algorithms, the application automatically detects skin tones and creates a mask (adjustments can be made to the mask, if needed) while you control skin enhancement with parameters such as the amount of smoothing and sharpening. And, for clients who do their own makeup, you can easily retouch the shiny areas of the skin. Of course, there are presets that are one-click simple to apply, and while you can't save your own presets, Digital Anarchy promises additional presets will be released in the future. There are helpful tutorials on the website, and the user manual (free via download) is an excellent guide that will ensure a quick and efficient portrait editing workflow.
