I have attached a business rule to several different columns in several different tables in several different models. When I use the views to query from, I can not find one that will let me see which columns of which tables of which models the business rule is attached. Any ideas on how to query in order to see the business rules at column level? I have only been able to see them at table level and that is of no use to me. Thanks in advance, Sandi Weller Virginia Department of Game and Inland Fisheries I've got a query that should work for the columns.

What is the best way to apply rules to data in the database? If it cannot be done with the database itself a recommendation of a third party tool will be great. However please not that I cannot use any GUI. I need to declare the rules and get the result of the rule into my application which can be in C++ or C#. Thanks for all the h.

A data warehouse database is generally stored in very large relational database management systems (RDBMSs). A data warehouse database can be subdivided into more manageable or domain-specific environments referred to as data marts.

Data design is the graphical representation of metadata. It provides a blueprint of the data warehouse database implementation. In addition, data design is the only automated way to optimize data warehouse performance

and data access.
