The cost of a water heater will vary depending on the type you want to install. A conventional, electric tank-style heater will cost the least. A tankless water heater will cost more up front, but will just heat up the amount of water needed at a time, so they are more energy efficient. In fact, it makes sense to consider the cost of running a water heater along with the initial cost of the heater itself. The energy used by a water heater can account for a quarter of a monthly energy bill. In general, gas heaters cost \$100-\$150 less per year to operate than electric one, tankless, on-demand heaters cost an additional \$100 less, on average. Broadly speaking, gas and electric water heaters last 10-15 years, and tankless heaters may last to 20 years (but they are still new in the market). So, be sure to consider the overall costs associated with choosing a water heater beyond the initial cost of the purchase. If you want help selecting a water heater or if you want to have one installed, rely on Porch to connect you with experienced pros in your area.

You may need to replace the thermostat, or check the circuit breaker box to see if the water heater has been tripped. You may have a more serious problem such faulty wiring. The most serious issue of all is a leaky tank. If you have a leaky tank, you 'll need to shop for a new water heater. These vary in price and energy efficiency by type of heater.
